

# BI296: Linux and Shell Programming

Maoying, Wu

ricket.woo@gmail.com

Dept. of Bioinformatics & Biostatistics  
Shanghai Jiao Tong University

Spring, 2018

# Course Overview

BI296

Maoying Wu

Outline

CS-Fundamentals

Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

- ▶ **Course Description:** Linux command line, system administration and bash/python programming
- ▶ **Prerequisite:** None
- ▶ **Textbook:** None
- ▶ **Grading:** Grades will be determined roughly by
  - ▶ Assignments: 20%
  - ▶ 5 Quizzes: 25% total
  - ▶ 2 Take-home Practicals: 30%
  - ▶ Projects: 25%
- ▶ **Exams:** There will be 5 quizzes, 2 bring-home practicals. All exams will be open-book, and will cover materials from lectures, discussions, labs and extracurricular readings.
- ▶ **Webpage:**  
<http://cbb.sjtu.edu.cn/course/bi296>
- ▶ **Github:**  
<https://github.com/ricket-sjtu/bi028>

# Course Schedule

Schedule is to be changed according to the practical reasons.

- ▶ Lecture 01: Fundamental Knowledge about Linux
- ▶ Lecture 02: Dummy **Linux Commands**
- ▶ Lecture 03: Linux File System, Process Management
- ▶ Lecture 04: Regular Expression - **GREP, SED and AWK**
- ▶ Lecture 05: **Shell Programming** (BASH)
- ▶ Lecture 06: System Administration
- ▶ Lecture 07: Fundamental **Python Programming**
- ▶ Lecture 08: Data Structures and Algorithms in Python
- ▶ Lecture 09: Scientific computing with Python
- ▶ Lecture 10: Python **Data Science**

## Outline

### CS-Fundamentals

#### Linux Overview

Operating System (OS)  
Why Linux?  
Linux vs. Windows vs. MacOS  
Basic Knowledge  
Linux Commands

# Assignment Policy

## Outline

### CS-Fundamentals

### Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

- ▶ To: `ricket.woo@gmail.com`
- ▶ Title: `lab1_516080910001`
- ▶ Attachment: `lab1_5160809010001.tar.gz`
- ▶ **Late Policy**
  - ▶ Solutions to assignments should be submitted before the due.
  - ▶ Being late within 3 days will get the 50% grades.
  - ▶ Later more than 3 days will get no grades.

How to fix  
any computer

The Dilemma

https://thesadmad.com

**Step 1** Reboot

Did that fix it?  
 No Proceed to step 2

**Step 2**

Format hard drive.  
 Reinstall Windows.  
 Loss of your files. Quietly weep.

**Step 1** Take it to an Apple store.

Did that fix it?  
 No Proceed to step 2

**Step 2** Buy a new Mac.

Overdraw your account. Quietly weep.

**Step 1**

Learn to code in C++. Recompile the kernel. Build your own microprocessor out of spare silicon you had lying around. Recompile the kernel again. Switch distros. Recompile the kernel again but this time using a CPU powered by refracted light from Saturn. Grow a giant beard. Blame Sun Microsystems. Turn your bedroom into a server closet and spend ten years falling asleep to the sound of whirring fans. Switch distros again. Abandon all hygiene. Write a regular expression that would make other programmers cry blood. Learn to code in Java. Recompile the kernel again but this time while searching your laptop socket.

Did that fix it?  
 No Proceed to step 2

**Step 2**

Revert back to using  
 Windows or a Mac.  
 Quietly weep.

Stop here and Ask

# Any Questions?

## Outline

## CS-Fundamentals

## Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

- ▶ Central Processing Unit (CPU, 中央处理器)
- ▶ Graphical Processing Unit (GPU, 图形处理器)
- ▶ Cache (高速缓存)
- ▶ Storage (存储) : bit, Byte, KB, MB, GB, TB, PB, EB, ZB
- ▶ Input/Output (输入输出)
- ▶ Controller (控制器)

# Number system

BI296

Maoying Wu

Outline

CS-Fundamentals

Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

- ▶ Decimal (十进制)
- ▶ Binary (二进制)
- ▶ Octal (八进制)
- ▶ Hexadecimal (十六进制)

# Exercise

BI296

Maoying Wu

Outline

Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

decimal	binary	octal	hexadecimal
12.68			
	1001110		
		7553	
			9FA5

# Machine digit (机器数的二进制表示)

BI296

Maoying Wu

Outline

CS-Fundamentals

Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

- ▶ Original (原码)
- ▶ One's complement (反码)
- ▶ Two's complement (补码)

1. Convert these positive decimal to binary:
  - ▶ 133d
  - ▶ 25d
  - ▶ 73d
2. Convert these negative decimal values to negative binary using one's complement and two's complement(补码, 假设计算机字长为8bit):
  - ▶ -192d
  - ▶ -16d
  - ▶ -1d
  - ▶ -0d

## Outline

### CS-Fundamentals

#### Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

- ▶ Host (主机), Domain (域)
- ▶ IP Address, IPv4, IPv6
- ▶ Physical Address (MAC Address)
- ▶ Gateway(网关), netmask (子网掩码)
- ▶ Domain Name Server (DNS, 域名服务器)
- ▶ Network Communication Protocol (网络通信协议)

# The Definition of Operating System (OS)

## Wikipedia

An **OS** is a collection of software that manages computer resources (CPUs, memory, storage, etc.) and provides universal services for a set of computer programs.

Figure : Operating System

# The principal tasks of OS

Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

A free and open-source UNIX-like operating system developed under the GNU General Public License (GPL).

- ▶ Free and open source (自由、开源) .
- ▶ More and more popular (时髦) , especially in the field of scientific computing.
- ▶ Portable (可移植) : Supports most of the available computers

# A Short History of UNIX

BI296

Maoying Wu

Outline

CS-Fundamentals

Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

- ▶ Prototype: *Multics* by AT&T Bell Lab, GE and MIT
- ▶ 1969, UNIX by Ken Thompson and Dennis Ritchie
- ▶ 1973 UNIX rewritten with C (providing portability)
- ▶ Berkeley UNIX (BSD UNIX)
- ▶ 1983, System V
- ▶ Commercial Products: SunOS, Solaris, HP-UX, AIX, SCO-UNIX

# Advantages of UNIX

BI296

Maoying Wu

- ▶ Unix is very simple
  - ▶ Implements only hundreds of system calls (系统调用) and
  - ▶ have a straightforward, even basic design.
- ▶ In UNIX, everything is a file, which unifies the manipulation of data and devices into a set of core system calls.
- ▶ Kernels (内核) and all related system utilities are written in C and ASM
- ▶ Fast process creation and unique *fork()* system call.
- ▶ Providing simple yet robust IPC (进程通信) primitives.
- ▶ Exhibiting clean layering, with a strong separation between policy (what to do) and mechanism (how to do).

# M2: Multi-User and Multi-tasking

BI296

Maoying Wu

Outline

CS-Fundamentals

Linux Overview

Operating System (OS)

Why Linux?

Linux vs. Windows vs.

MacOS

Basic Knowledge

Linux Commands

- ▶ Linux is a multi-user, multi-tasking OS
  - ▶ Multiple users can run multiple tasks simultaneously, independent of each other.
- ▶ Always need to “log in” before using the system
  - ▶ Identify yourself with username + password
- ▶ Ways to log in to the system
  - ▶ Console: Directly attached keyboard, mouse, monitor
  - ▶ Serial terminal
  - ▶ Network connection (ssh, telnet, etc.)
